

**Amendments to the Claims:**

Please amend the claims as indicated in the marked-up version of the listing of claims presented below. This listing of claims replaces all prior versions and listings of claims in the present application.

**Listing of Claims**

Claims 1-51 (Cancelled).

52. (New) A pressure washer frame comprising:
- a base defining a first plane and configured to support a power unit;
  - four legs extending from the base;
  - a support coupled to each of the respective legs, each support configured to support the legs on a surface;
  - a handle coupled to the base, the handle including
    - an upper end;
    - a first support member extending between the upper end and the base, the first support member defining a first axis;
    - a second support member extending between the upper end and the base, the second support member defining a second axis;

wherein the first and second axes lie in a second plane that intersects the first plane, wherein the first support member is configured to form a first acute included angle (C) with the first plane that lies in the second plane, wherein the second support member is configured to form a second acute included angle (D) with the first plane that also lies in the second plane, and wherein the second plane is configured to form a third acute included angle (H) with the first plane.

53. The pressure washer frame of Claim 52, wherein the supports define a footprint having a first width, and wherein the upper end of the handle has a second width less than the first width.

54. The pressure washer frame of Claim 52, further comprising an accessory holder coupled to the handle.

55. The pressure washer frame of Claim 54, wherein the accessory holder is integrally formed as one piece with the handle.

56. The pressure washer frame of Claim 52, wherein the handle includes a plurality of grip ridges.

57. The pressure washer frame of Claim 52, wherein at least one of the legs is substantially aligned with the first axis, and wherein at least one of the legs is substantially aligned with the second axis.

58. The pressure washer frame of Claim 57, wherein the first support member is contiguous with the leg with which it shares the first axis, and wherein the second support member is contiguous with the leg with which it shares the second axis.

59. The pressure washer frame of Claim 52, wherein each of the legs is configured to form an obtuse included angle (G) with the base.

60. The pressure washer frame of Claim 52, further comprising a front panel coupled to the handle.

61. The pressure washer frame of Claim 52, wherein the first axis is configured to form a first acute exterior angle (E) with respect to the upper end of the handle in the second plane, and wherein the second axis is configured to form a second acute exterior angle (F) with respect to the upper end of the handle in the second plane.

62. The pressure washer frame of Claim 52, wherein the base includes an aperture therein configured to receive a portion of the power unit.

63. The pressure washer frame of Claim 62, wherein the base includes a mounting plate configured to support the power unit.

64. The pressure washer frame of Claim 52, wherein the frame is integrally formed as one piece from a plastic material.

65. The pressure washer frame of Claim 52, wherein each of the legs (34C, 34D) is configured to form an obtuse included angle (A, B) with the base.
